

Course: Engineering Mechanics

Code: MEL1010

Tutorial: 03

Question 1: Replace the force and couple system by an equivalent force and couple moment at point O.

Question 2: Replace the  acting on the beam by a single resultant force. Specify where the force acts, Measured from end A.

Question 3: The uniform beam has a mass of 50 kg per meter of length. Compute the reactions at the support O. The force loads shown lie in a vertical plane.

Course: Engineering Mechanics

Code: MEL1010

Tutorial: 03

Question 4: The three-wheel truck is used to carry the 100-kg box as shown. Calculate the changes in the normal force reactions at the three wheels due to the weight of the box.

Question 5: Each of the three uniform 1200-mm bars has a mass of 20 kg. The bars are welded together into the configuration shown and suspended by three vertical wires. Bars AB and BC lie in the horizontal x-y plane, and the third bar lies in a plane parallel to the x-z plane. Compute the tension in each wire.

Course: Engineering Mechanics

Code: MEL1010

Tutorial: 03

Question 6: Determine the force in each member of the loaded truss. Make use of the symmetry of the truss and of the loading.

Question 7: A drawbridge is being raised by a cable EI . The four joint loadings shown result from the weight of the roadway. Determine the forces in members EF , DE , DF , CD , and FG .
